# OUTLINE

---

- Executive Summary
- Introduction
- Methodology
- Results
  - Visualization – Charts
  - Dashboard
- Discussion
  - Findings & Implications
- Conclusion
- Appendix

# EXECUTIVE SUMMARY

---

- Over 10k entries to identify the trend of the industry
- Most commonly used
  - Language: JavaScript
  - Database: MongoDB
  - Web Frame: React.js
- Most desired to work with next year:
  - Language: JavaScript
  - Database: PostgreSQL
  - Web Frame: React.js
- Overwhelmingly male respondent base
- Overwhelmingly American respondent base

# INTRODUCTION

---

- Thousands of respondents from across the world
- Technologies currently used were asked:
  - Language
  - Database
  - Web Frame
  - Operating System
- Technologies to be used next year
- Comparison
  - Present and Future
  - By multiple metrics

# METHODOLOGY

---

- Web Scraped data using Python
- Exploring the data using SQLite and Python
- Cleaning the data for use
- Visualization of Data
  - Google Looker Studio
  - SQLite, Pandas and Seaborn Libraries from Python

# RESULTS

---

There seems to be little shift in the use of any technology with the only one to present a noticeable change being databases with PostgreSQL overtaking MongoDB.

We can see a predominantly male respondent base primarily from the U.S.

We can see the use of Windows, Linux and MacOS still retain the top 3 most used operating Systems.

We were able to gather better insight on the it industry's professionals.

# PROGRAMMING LANGUAGE TRENDS

## Current Year

Top 10 Language Used

## Next Year

Top 10 Languages for Next Year

# PROGRAMMING LANGUAGE TRENDS - FINDINGS & IMPLICATIONS

---

## Findings

- JavaScript remains at the top though with decrease in popularity
- Increased interest in non-web languages
- Go seems to be garnering interest quickly

## Implications

- The overall distribution of languages seems stable
- Interest in web development seems to be cooling down
- There is an interest in new languages/ engagement with new versions of existent ones

# DATABASE TRENDS

## Current Year

Top 10 Database

## Next Year

Top 10 Databases for Next Year

# DATABASE TRENDS - FINDINGS & IMPLICATIONS

---

## Findings

- PostgreSQL overtakes MongoDB in the projection
- SQLite seems to have lost the most in the prediction
- Little change overall

## Implications

- The userbase of established databases are very stable
- Renewed interest in PostgreSQL can be due to a recent or near update
- Databases with a small userbase seem to be migrating to bigger ones

# DASHBOARD

---

# DASHBOARD TAB 1

Top 10 Language Used

Top 10 Database

Most Used Platforms

Most Used WebFrames

# DASHBOARD TAB 2

Top 10 Languages for Next Year

Top 10 Databases for Next Year

Platform Desire for Next Year

Most Desired WebFrames for Next Year

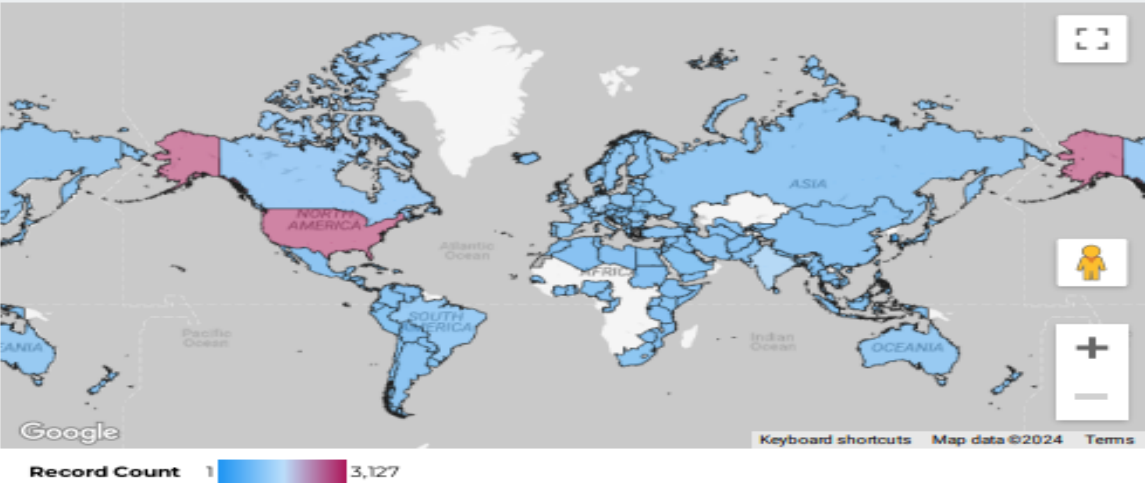

# DASHBOARD TAB 3

Respondent by Gender

Respondent per Country

Number of Respondents per Age

Number of Respondents by Education Level and Gender

# DISCUSSION

---

- For future reference we should review our data gathering methods to ensure that the respondents' gender ratio is a reflection of the industry, not of flawed gathering method

# OVERALL FINDINGS & IMPLICATIONS

---

## Findings

- Predominantly young male respondent base from the U.S with a bachelor's or master degree
- Stability in the use of technology with a slight shift to more popular technologies
- We can see that there is a healthy influx and interest on the industry

## Implications

- A young demographic with a continuous interest on the industry
- A cycle of more popular tool gets more support and thus gets more popular may be happening
- The use of more customizable platforms like Linux and Docker seem to be preferred

# CONCLUSION

---

- The respondent base is high from across the world indicating a universality to the trend
- A young respondent base with ages from 23 to 31 who are engaging with the subject indicates a healthy amount of professionals entering the industry
- There seems to be a preference for customizability for professionals when it comes to platform use
- With more refined data we will be able to get a more definite picture of the industry but even now we can get a good view of the pattern of behavior
